

Zulivio User Manual

A step-by-step guide to every major workflow in Zulivio — the open-source, self-hostable workforce-operations CRM — with real screenshots, including how to connect an AI assistant via MCP.

1. Create your organization

1. Go to your Zulivio URL — a new install lands on **Create your organization**.
2. Fill in your organization name, your full name, email, and a password.
3. Click **Create organization**. You are signed in immediately as the Master Owner — the highest role, with full access.

The screenshot shows a dark blue background with a white Zulivio logo at the top center. Below the logo is a white form titled "Create your organization". The form contains the following fields and text:

- Create your organization**
This creates your company and its first Master Owner account.
- Organization name
- Your full name
- Email
- Password (min 10 characters)
- Create organization** (green button)

At the bottom of the form, it says "Zulivio - made by NodeDR Infotech Private Limited". In the bottom left corner of the dark blue area, there is a small circular logo with the letter 'N'.

The setup form, filled in

Your home dashboard right after setup

2. Create an employee

1. Open **Employees** in the left sidebar (under Management).
2. Fill in the **Full name**, **Email**, choose a **Role**, and optionally a **Department**.
3. Click **Create employee**.
4. A temporary password is shown once — share it with the employee so they can sign in and set their own password.

The screenshot displays the 'Employees' management interface. On the left is a dark sidebar with a navigation menu. The top header shows the user 'Priya Shah' as the 'MASTER OWNER'. The main content area is titled 'Employees' and includes a descriptive subtitle. Below this is a form to 'Add employee' with fields for 'Full name', 'Email', a 'Role' dropdown (currently set to 'EMPLOYEE'), and an optional 'Department' field. A green 'Create employee' button is positioned below the form. Further down is a 'Directory' table listing existing users.

3. Clock in and out (attendance)

1. Open **Start Work** — every employee sees this as their home base for the day.
2. Click **Start shift** to clock in. A break can be started/ended from the same widget.
3. Click **End shift** when the work day is done.

Before clocking in

After clocking in — shift is now running

4. Tasks

1. Open **Tasks** to see assignments owned by you, grouped into Pending / Completed / All / Workflow Runs tabs.
2. Click into an assignment to update its status as work progresses (Assigned → In Progress → Completed, etc.) — only along allowed transitions, same rules whether you use the app or an MCP-connected AI assistant.

The Tasks page

5. Leads and the sales pipeline

1. Open **Leads** (Manager+ sees the whole team's leads; everyone else sees their own).
2. Fill in the lead's name and any details you have — everything except full name is optional.
3. Check **Auto-assign via active rotation rule** to let Zulivio route it automatically, or leave it to assign yourself.
4. Click **Create lead**.
5. Open **Pipeline** to track leads through your sales stages once converted to an opportunity.

The screenshot shows the 'Leads' page in the Zulivio application. On the left is a dark sidebar with a navigation menu. The main content area is titled 'Leads' and includes a subtitle 'Capture, qualify, and convert leads into opportunities.' and an 'Export CSV' button. The page is divided into three main sections: 'New lead', 'Import from CSV', and 'Directory'. The 'New lead' section contains input fields for 'Full name', 'Email (optional)', 'Phone (optional)', 'Company (optional)', 'Source (optional)', and 'Territory (optional)', along with a checked checkbox for 'Auto-assign via active rotation rule' and a 'Create lead' button. The 'Import from CSV' section has a 'Choose CSV file' button (showing 'No file chosen') and an 'Import' button. The 'Directory' section shows 'No leads yet.' The bottom section, 'Assignment rules', includes a 'Rule name' field, a '60' value field, and a 'Round robin' dropdown menu. A user profile for 'Priya Shah, MASTER OWNER' is visible in the top right corner.

6. Quality audits

1. Open **Quality**. Managers and above can score a team member's work; everyone sees their own published results.

The Quality Audits page

7. Agent Assist and Helpdesk

1. Open **Agent Assist** for a quick, knowledge-driven lookup while on a call — no AI, by design, so answers only ever come from your own knowledge base and CRM data.
2. Open **Helpdesk** for step-by-step runbooks a Manager+ has published — pick one and follow the steps.

The screenshot displays the 'Agent Assist' interface. On the left is a dark sidebar with a navigation menu. The main content area is titled 'Agent Assist' and includes a subtitle: 'Look up a caller and pull real CRM context and knowledge base guidance — no AI, just your own data.' Below this, there are three input fields: 'Phone number', 'Lead ID (optional)', and 'Campaign (optional)'. A green 'Look up' button is positioned below the 'Phone number' field. The top right of the interface shows a user profile for 'Priya Shah, MASTER OWNER'.

8. Sales dashboard and team directory

1. Open **Sales Dashboard** (Manager+) for pipeline stats, a 14-day trend, and drill-down into any stage or rep.
2. Open **Team Directory** (Sales Head+) to see everyone in your reporting subtree, with a click-through detail page per person.

CSV and Google Sheets import/export for employees, assignments, leads, and opportunities. Lead-specific import lives on the [Leads](#) page, next to lead management.

CSV export

Export employees.csv

Export assignments.csv

Export leads.csv

Export opportunities.csv

Import employees from CSV

Header row must include `full_name`, `email`, and optionally `role`, `department`.

Choose CSV file

No file chosen

Import

Import opportunities from CSV

Header row must include `title`, and optionally `company`, `amount` (major currency units, e.g. 1500.00) or `amountMinor`, `expectedCloseDate`. Lands in the default pipeline's first stage.

Choose CSV file

No file chosen

Import

Google Sheets sync

Not configured

Set `GOOGLE_SHEETS_CLIENT_EMAIL` and `GOOGLE_SHEETS_PRIVATE_KEY` (a Google service account) on the backend, then share your spreadsheet with that service account's email, to enable live import/export.

Data Hub — CSV / Google Sheets import-export

9. Settings

1. **Profile** — your name, email, and role at a glance.
2. **Team** — everyone visible to you at your rank.
3. **Password** — change your own password any time.
4. **API Keys** — generate a personal access token to connect an AI assistant (see the next section). Give it a name, click **Create key**, and copy the token immediately — it is shown exactly once.
5. **Backups & Activity** (Master Owner) — connect an S3-compatible bucket for automatic backups, and review the audit log.
6. **Integrations** (Master Owner) — connect a Google service account for live Sheets import/export.

Integrations tab

10. Connect an AI assistant (MCP server)

1. Generate an API key from Settings → API Keys (step 9 above).
2. Point your MCP client (Claude, ChatGPT, or any other MCP-capable assistant) at `https://<your-zulivio-domain>/api/v1/mcp` , authenticated with an `Authorization: Bearer <your-api-key>` header.
3. The assistant can now read your tasks, check the sales dashboard, log attendance, create leads, and more — but only what your own account is already allowed to do. Full setup commands for specific clients are in the README's "MCP server" section, also mirrored on the public `/docs` page below.
4. Revoke a key any time from the same tab — it stops working immediately.

Sign in

Zulivio docs

Open-source, self-hostable workforce-operations CRM. This page is public — no sign-in required — for anyone evaluating Zulivio or connecting an AI assistant to an existing instance.

User manual

A full step-by-step guide to every major action in the app — creating employees, running quality audits, connecting the MCP server below, and more — with real screenshots.

Download the PDF user manual

MCP server

Zulivio exposes a [Model Context Protocol](#) server so an AI assistant (Claude, ChatGPT, or any other MCP-capable client) can act on your Zulivio account directly. Each connection is a personal API key generated from Settings → API Keys once signed in — a key carries no permissions of its own, it just resolves to the employee who created it, so the assistant can only ever do what that employee could already do in the app. The tool list is a deliberately curated subset of the API: nothing destructive (no deleting employees, no role changes, no backup restore) is reachable this way.

Endpoint

`https://<your-zulivio-domain>/api/v1/mcp`

Test the connection

```
curl -X POST https://<your-zulivio-domain>/api/v1/mcp \
-H "Authorization: Bearer <your-api-key>" \
-H "Content-Type: application/json" \
-H "Accept: application/json, text/event-stream" \
-d '{"jsonrpc":"2.0","id":1,"method":"tools/list","params":{}}'
```

Tool	Type	Notes
list_employees	Read	Scoped by caller's role, same as the Employees page

The public `/docs` page — MCP connection info and this manual, no sign-in required
